

**Abstract of the Disclosure**

Sub A

5 A system, method, and computer readable medium creating a custom frameset within at least one non-web-based computer application. The system enables a user to customize a view containing a plurality of documents in frames, wherein the documents may include web documents and non-web documents, using predefined framesets. A graphical user interface may be provided that presents a user with various options relating to predefined framesets. The user may select one or more options relating to, for example, various attributes of each frame within a predefined frameset including the number, size, and orientation, to customize the layout of the view. The user may then specify one or more attributes to be assigned to each frame. The predefined frameset may then be customized according to the user's selection(s). The options may also include enabling users to divide the view into individual frames. The user may also be presented with one or more graphical user interfaces which present the user with various options that may be customized for a particular view.
